

Carbon footprint

Curriculum for Excellence Level **Second, Third**

Time needed for activity **30 – 45 minutes**

Location **Outdoor environment with access to a range of trees**

Context

This activity plan highlights the important role trees have in absorbing carbon dioxide from the atmosphere through photosynthesis storing it as carbon in the form of wood.

Curriculum links

Sciences: Energy sources and sustainability/Processes of the planet

Social studies: People, place and environment

Please note that this activity will also help deliver outcomes in of Literacy and English, and Mathematics.

- Second**
- By considering examples where energy is conserved, I can identify the energy source, how it is transferred and ways of reducing wasted energy.
SCN 2-04a
SOC 2-08a
 - Through exploring non-renewable energy sources, I can describe how they are used in Scotland today and express an informed view on the implications for their future use.
SCN 2-04b

- Third**
- By contributing to experiments and investigations, I can develop my understanding of models of matter and can apply this to changes of state and the energy involved as they occur in nature.
SCN 3-05a
SOC 3-08a
 - I can explain some of the processes which contribute to climate change and discuss the possible impact of atmospheric change on the survival of living things.
SCN 3-05b

Additional resources

Forests for the future: a resource investigating trees, forests and climate change
www.forestsforthefuture.co.uk

Forests for the Future is designed for upper primary learners to explore the local and global issues surrounding climate change and sustainable development. There is a focus on the role that trees, forests, and people can play in reducing and/or mitigating any negative impacts.

The Forests for the Future resource seeks to encourage teachers and their learners outdoors – using local trees, parks and woodland areas (private and public) to help understand climate change issues, the value of trees in the carbon cycle, and what individuals and schools can do to make a difference.

Objectives

By the end of this activity learners will be able to:

- work out their carbon footprint using measurement, calculations and a graph
- measure how much carbon is stored in trees
- explain the important role of trees in storing carbon

Equipment and resources consider how to make changes to reduce their carbon footprint

- **Information note - Carbon**
- **Resource cards - Carbon footprint**
- **Worksheet - Carbon footprint**
- **Clipboards**
- **Pencils**
- **Tape measures**
- **Calculators**
- **Tree ID sheets, apps or books**

What to do

- 1 Spread out the footprint cards in an area (if necessary, weigh down e.g. stones, tie to trees, etc).
- 2 Discuss what a carbon footprint is and how our everyday activities emit carbon – see Information Note - Carbon.
- 3 Learners can work individually, in pairs or small groups (footprints should be calculated based on the activities of one member of the group or pair or agree an average representative figure).
- 4 Distribute worksheets, clipboards and pencils.
- 5 Learners can follow the step by step instructions on the worksheet to calculate their annual carbon footprint. By locating and replacing the scattered carbon footprint resource cards learners can complete the missing values in the first column on their work sheet.
- 6 Having calculated their total annual carbon emissions, learners can follow the instructions on the worksheet to find a tree that stores that amount of carbon.
- 7 A separate calculation allows learners to work out how long it has taken for their chosen tree to absorb their annual carbon emission, i.e. the age of the tree.
- 8 Compare results by asking learners to order themselves in a line from highest carbon footprint to the lowest. Discuss how everyone, especially those with higher carbon footprints could reduce their impact by making changes in their everyday lives.

Key questions

- **What is a carbon footprint?**
- **What might contribute to our carbon footprint?**
- **How are trees connected to our carbon emissions?**
- **How can we reduce our carbon footprint?**

Adapting for different needs/abilities

Less able

- Go through worksheet step by step using yourself as an example.
- Complete the worksheet as a group: leader to use an average for each of the activities following discussions with the group.
- Break down each stage of the worksheet and check results and understanding before moving onto the next stage.

More able

- Hide or spread the Resource cards - Carbon footprint over a larger area.
- Learners to work through worksheets independently.
- Complete worksheet without calculators.

Follow up activity/extension

- Calculate the carbon footprint of a household, whole school, etc.
- Put an action plan in place to reduce the calculated carbon footprint.

Try our other Trees and Woodlands activity plans:

- Activity plan - Seed dispersal
- Activity plan - Tree planting
- Activity plan - Carbon storage calculator

Additional information

See Information note - Carbon

“Thank you to Natural Resources Wales for sharing this resource with Outdoor & Woodland Learning Scotland”
